DETAILED ACTION

1. This office action is in response to the communication filed July 30, 2007.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 2 – 6 and 45 are rejected under 35 U.S.C. 102(e) as being anticipated by Logan et al. (US 6,931,451 B1), hereinafter Logan.

Claim 2: Logan discloses a method for allowing a user to manipulate an audio signal (Figure 5), the method comprising steps of: receiving a broadcast data signal (Column 5 Line 66 – Column 6 Line 12), the broadcast data signal including an encoded audio signal; decoding the audio signal from the broadcast data signal (Column 6 Lines 12 – 31); storing the audio signal as a plurality of segments in a storage device, wherein the plurality of segments reside simultaneously in the storage device (Column 9 Lines 20 – 25 and Column 15 Lines 8 – 45); determining whether an audio manipulation signal is received; automatically identifying at least one segment of the stored audio signal responsive to the audio manipulation signal; reading the at least one segment of the

stored audio signal; manipulating the at least one segment of the audio signal responsive to receipt of the audio manipulation signal; and outputting the manipulated audio signal (Column 4 Lines 1 – 38, Column 16 Lines 10 – 31, and Column 21 Lines 13 – 19).

Claim 3: Logan discloses the method of claim 2, further comprising a step of encoding the audio signal prior to the step of storing (Column 4 Lines 34 – 38).

Claim 4: Logan discloses the method of claim 2, wherein the manipulated audio output signal is outputted in a linear manner (“replayed” at a later time without altering, Column 15 Lines 8 – 13).

Claim 5: Logan discloses the method of claim 2, wherein the manipulated audio output signal is outputted in a non-linear manner (“fade-in effect,” Column 3 Lines 30 – 44 and also “randomized,” Column 17 Lines 35 – 49).

Claim 6: Logan discloses the method of claim 2, wherein the audio manipulation signal is representative of a request to identify a type of meta-data in the audio signal (Column 15 Lines 27 – 45).

Claim 45: Logan discloses the method of claim 6, further comprising: determining whether meta-data in the audio signal matches an entry within a list of audio segments (Column 15 Line 27 – 45).

Response to Arguments

4. Applicant's arguments with respect to claim 3 have been considered but are moot in view of the new ground(s) of rejection.
